Angel Perez

Information Systems Engineer – Senior Software Engineer & Software Architect

+54 2614699639 | pasaperez@yahoo.com.ar | linkedin.com/in/pasaperez | github.com/pasaperez

Summary

I am an Information Systems Engineer, Senior software engineer and architect with over 7 years of experience designing, modernizing and operating scalable enterprise-grade platforms, from high-volume fintech payment services to a multi-tenant SaaS I co-founded, architected and took to production. Strong foundation in Java/Spring Boot, TypeScript, event-driven and modular architectures, CI/CD and secure production operations, with proven leadership in establishing coding standards and mentoring backend and full-stack teams. Co-creator of DevFlow, a spec-driven development method that lets AI coding agents deliver production code under independent review and verifiable quality gates.

Technical Skills

Languages & Runtimes: Java, JavaScript/TypeScript (NodeJS, V8, Bun), Go, C/C++, Python, R, Dart

Backend & Testing: Spring (Boot, Security, Data JPA), Hibernate, Flyway, Querydsl, MapStruct, Express, Sequelize, Mongoose, Jest, JUnit, Testcontainers, Vitest, Playwright

Frontend: Angular, React, TanStack Query, Vite, DurandalJS, Knockout, Thymeleaf, HTML/CSS, AlpineJS, Bootstrap, Flutter

Databases: MySQL, MariaDB, PostgreSQL, MS SQL Server, SQLite, H2, MongoDB, CouchDB, DynamoDB, Redis/Valkey, Firestore

DevOps & Cloud: Git, Docker, Kubernetes, GitHub Actions, Jenkins, Caddy, Cloudflare, Sentry, Selenium, GCP, AWS (EC2, Lambda, SQS, KMS), Kong, Nullplatform, OpenShift, Groovy

Architecture & Patterns: Microservices, Modular Monolith, Hexagonal, Event-driven, REST APIs, Multi-tenancy, M2M Authorization (AuthGuard), MVC, DDD, TDD, BDD, OOP

AI Engineering: Spec-Driven Development (DevFlow, Spec Kit, OpenSpec), AI coding agents (Claude Code, OpenCode), multi-agent review, LLM integration (DeepSeek, Ollama), document extraction

Methodologies: Agile (Scrum, Kanban), CI/CD Pipelines, Gitflow, Code Review, Clean Code, DevOps, Observability

Professional Experience

Co-founder & Staff Software Engineer Jun 2026 – Nov 2026

Visto Bueno – Ojeda & Perez Asoc. Simp. | *vistobueno.tech* *Mendoza, Argentina*

- Co-founded and launched to production a rental-operations SaaS (identity and credit checks, AI document reading, case files, contracts) for agencies, tenants, landlords and portals; owned architecture, engineering, deployment and technology decisions, and shaped analysis and product.
- Led the design of a multi-tenant Spring Boot 4 modular monolith (Java 25+, PostgreSQL 16, Flyway, MinIO) with hexagonal boundaries across multiples modules enforced by architecture tests, plus React 19 + TypeScript apps.
- Built AI document reading with DeepSeek, Anthropic and a local Ollama provider to extract identity and income data from ID cards and payslips, plus branded PDF rendering and revision history for AI-drafted lease contracts.
- Owned deployment and operations: one-command Docker Compose deploys to a hardened VPS (rootless Docker, Caddy TLS edge, Cloudflare) with isolated dev/prod, pre-migration DB snapshots and automatic restore and rollback.
- Built GitHub Actions CI/CD with path-scoped suites that rerun only what changed since the last green build, gating ∼10,000 JUnit tests, Playwright E2E, 100% coverage on frontends and immutable migrations.
- Hardened security with tenant isolation, Cloudflare Turnstile and per-origin rate limits on anonymous endpoints, a strict CSP, Google Sign-In, AES-256-GCM-encrypted secrets and PII-free logging with Sentry.
- Co-created DevFlow (spec-driven development for AI agents) and built QAFlow (AI-generated end-to-end QA), behind 230+ reviewed work items and 500+ end-to-end tests (see Key Projects).

Senior Software Engineer Nov 2025 – Nov 2026

IT Consultores ITTI SAECA – Wepa, nationwide payments & collections network *Remote*

- Owned architecture and delivery of core payment services in a polyglot stack (Java/Spring Boot, Node.js, Python, Go) processing millions of transactions per day, with near-full autonomy over architecture and product decisions.
- Built the cash-in/cash-out API and asynchronous payment pipeline (SQS + Lambda); fixed timeout handling across hundreds of external billers, preventing hundreds of transaction reversals and company-absorbed losses.
- Designed the M2M authorization layer for microservices with AuthGuard, AWS KMS and DynamoDB, standardizing access control across the platform.
- Improved observability and incident detection to diagnose mass outages faster, and masked sensitive data in critical payment flows.
- Reworked deployments from full-system downtime to zero-downtime releases and hotfixes.
- Sustained and modernized a legacy fintech core while delivering new biller and merchant back-office integrations and operational tooling in Angular and React.
- Mentored less-senior engineers in a 10-person team through code reviews and pair programming.

Lead Developer May 2023 – Nov 2025

Pasaperez Asoc. Simple *Mendoza, Argentina*

- Led the design and development of two core systems, overseeing architecture, implementation, and deployment processes.
- Directed the creation of an exchange integration platform, ensuring efficient data processing and reliable communication between backend services.
- Supervised the development of a video analysis and categorization system powered by AI models, driving innovation and automation within the organization.
- Ensured code quality, scalability, and adherence to best practices across backend and frontend development teams.

Backend Technical Expert / Chief Operations Engineer Aug 2024 – Nov 2025

Slingr *US-based company/Remote, Mendoza, Argentina*

- Served as technical reference for the backend team, leading the design and implementation of complex solutions while ensuring technical quality.
- Conducted code reviews to ensure deliverables met quality standards, best practices, and established processes.
- Managed CI/CD pipelines, supervised cloud infrastructure, and implemented automation processes to optimize deployment workflows.
- Proposed and implemented improvements in key areas such as quality, productivity, and internal team processes.
- Collaborated in project planning, risk identification, and technical resource allocation.

Full-Stack Developer Nov 2024 – Nov 2025

Slingr *US-based company/Remote, Mendoza, Argentina*

- Led the development of new full-stack features within the slingr framework and platform, leveraging Angular, React and TypeScript to enhance user experience and backend performance.
- Implemented modular front-end components and RESTful APIs, ensuring scalability and maintainability across projects.
- Collaborated with cross-functional teams to integrate DevOps practices, automate deployments, and improve CI/CD pipelines.
- Contributed to architecture modernization efforts, introducing best practices in code quality, security, documentation, and testing.

Systems Engineer / Backend Developer Dec 2022 – Oct 2024

Slingr *US-based company/Remote, Mendoza, Argentina*

- Designed, developed, and maintained key integrations for the slingr platform, ensuring interoperability between services using Java and Node.js.
- Delivered internal tech talks on platform architecture and best practices, fostering knowledge sharing across engineering teams.
- Worked on core platform components including database management, load balancing, and performance optimization.
- Developed and optimized applications within the platform, focusing on new functionalities, APIs, and performance improvements.
- Provided comprehensive technical support, ensuring platform availability and stability for 5,000+ users.

Fullstack Software Developer Nov 2021 – Aug 2022
Software del Sur *Mendoza, Argentina*

- Participated in the development of multiple web platforms including clinical, commercial, and operational management systems.
- Developed interfaces for integrations with commercial services using NodeJS (Backend), Angular 8+ (Frontend), and MySQL/MariaDB.
- Mentored 5 junior developers, establishing coding standards and conducting code reviews to ensure quality deliverables.
- Implemented version control with Git/Bitbucket and managed project requirements with Trello.

Functional Analyst & Software Developer Mar 2020 – Aug 2022
Pasaperez Asoc. Simple (Concurrent) *Mendoza, Argentina*

- Conducted analysis, design, and development of Content Management System for public administration clients.
- Utilized Java/Spring/NodeJS (Backend), Angular 14/HTML/JS/CSS/Thymeleaf (Frontend), MS SQL Server, MongoDB (Database).
- Deployed solutions using Kubernetes/OpenFaaS on Google Kubernetes Engine (GCP).

Systems Engineer Mar 2021 – Dec 2021
Grupo Metacod (Concurrent) *Mendoza, Argentina*

- Led project management, analysis, design, development, testing, and implementation of a Code Generator System with Web Modeler.
- Co-authored Metacod System paper presented at 9th National Congress of Computer Engineering (CoNaIISI 2021).
- Implemented technology stack: Java/Spring (Backend), ReactJS/HTML/JS/CSS (Frontend), MS SQL Server (Database), Docker (Deployment on Amazon ECS).

Education

Universidad Tecnológica Nacional Mendoza, Argentina
Engineering Degree, Information Systems Engineering *Mar 2014 – Aug 2022*

Universidad Tecnológica Nacional Mendoza, Argentina
Degree, University Systems Analyst *Mar 2014 – Aug 2022*

Publications & Certifications

9th National Congress of Computer Engineering (CoNaIISI 2021) 2021
Co-author of Metacod System research paper *Argentina*

Introduction to Front-end Development with ReactJS 2020
Professional Certification *Online*

Blockchain and Bitcoin Principles 2020
Professional Certification *Online*

Key Projects & Achievements

DevFlow: Spec-Driven Development for AI Coding Agents | *Claude Code, OpenCode, Bash* 2026

- Co-created a stack-agnostic SDD method: a validated plan drives each item from spec to code through independent reviewer agents, risk-based tracks, human approval only at real decisions and an append-only evidence journal.
- Built its tooling: a tiered test runner with failed-first reruns, green-tree caching and a global lock, a dependency graph to parallelize items, and a gate that rejects any change adding technical debt.

- Used by the team to deliver 70+ plans and 230+ reviewed items in Visto Bueno; ported to OpenCode and reused in a second codebase.

QAFlow: AI-Generated End-to-End QA for a Whole System | *Claude Code, Playwright, Chrome MCP* 2026

- Built an AI QA method in which an agent explores the entire application as a real user (black box, real browser), logs every defect it hits and turns each explored path into Playwright tests that stay as regression.
- Its runs grew Visto Bueno's end-to-end suite from zero to 500+ tests (53 specs, 30 reusable helpers) covering happy, sad and edge paths, UX and multi-tenant isolation, and logged 148 findings across 19 runs.

Slingr Platform Modernization | *Java, Angular, MongoDB, CI/CD* 2022 – 2025

- Led comprehensive platform migration from Java 8 to Java 24, serving 5,000+ active users with enhanced performance and security compliance.
- Achieved 30-7000% performance optimization across multiple core platform processes through architectural improvements and code refactoring.
- Orchestrated frontend migration from DurandalJS to Angular and database upgrade from MongoDB 4 to 8, ensuring low-downtime deployment.
- Reduced CI/CD build times by 83% through pipeline optimization and automation improvements.
- Successfully achieved HIPAA and SOC 2 security certifications, implementing formal delivery and deployment processes for releases and hotfixes.
- Mentored and led a cross-functional team of up to 15 developers, establishing coding standards and best practices.

Metacod Code Generator System | *Java/Spring, ReactJS, Docker, AWS* 2021

- Designed and implemented a web-based code generation system that reduced project initialization time in software factories by 97% (from 4 months to 1 week) across 4 enterprise projects.
- Co-authored and presented research paper at the 9th National Congress of Computer Engineering (CoNaIISI 2021).

AI-Powered Video Classification System | *Bun, AI/ML, Microservices, Benchmarking* 2025 – Ongoing

- Designed and implemented an automated classification system capable of processing up to 8,000 videos and over 500 hours of footage using advanced AI models.
- Conducted extensive performance benchmarking to optimize dedicated task execution, achieving significant reductions in computational time and resource utilization.
- Engineered the microservices architecture for data processing, ensuring high throughput, scalability, and reliable communication across backend services.

Elixir Framework (Personal Project) | *Open Source, Microservices* | github.com/pasaperez/elixir Ongoing

- Developed a wrapper framework to simplify microservices development for CRUD operations in REST APIs, accelerating development cycles.
- Spring Boot base layer with generic controllers, services and repositories, a standardized APIResponse, global error handling, CORS and health endpoints: a full CRUD REST API takes four classes per entity.
